STUDENT PERFORMANCE ANALYTICS

Data-driven insights into academic performance

Presented by: Bhavika Gupta
class : BBA BA 2.2
Babu Banarasi Das University

Introduction

Turningstudentrecordsintoactionable academic insights

PROJECT OVERVIEW

- Student Performance Analytics examines marks, attendance, study habits and participation.
- Power BI transforms student records into interactive charts and KPI cards.
- The dashboard supports comparisons across classes and highlights areas where students may need support.

PROJECT OBJECTIVES

01 Evaluate academic performance

02 Monitor attendance patterns

03 Compare three BBA year groups

04 Support evidence-based interventions

Dataset Overview

A structured dataset prepared for classroom-level analysis

STUDENT RECORDS

300

Rows analysed

DATAFIELDS

15

Demographic + academic

BBA YEAR GROUPS

3

First, second and third year

SUBJECTS

5

Marks across five subjects

KEY FIELDS

- Student ID, age, gender and class
- Attendance percentage and weekly study hours
- Subject marks, total and average marks
- Result status and participation level

DATA WORKFLOW

01

EXCEL

Organise records

02

POWER BI

Model & visualise

03

INSIGHTS

Interpret patterns

Key Performance Indicators

Five headline measures summarise the current dataset

TOTAL STUDENTS	AVERAGE MARKS	AVG. ATTENDANCE	LOW ATTENDANCE	PASS RATE
300	71.24	78.80%	115	99.3%
Records analysed	Out of 100	All students	Below 75%	Based on result field

WHAT THE KPIs TELL US

- 298 of 300 students are marked Pass.
- 115 students fall below the 75% attendance threshold.

MANAGEMENT TAKEAWAY

A high pass rate does not remove the need to monitor attendance. Prioritise follow-up for students below the threshold.

Class-Wise Performance Analysis

Compare attendance and enrolment across BBA first, second and third year

AVERAGE ATTENDANCE BY CLASS

STUDENT COUNT BY CLASS

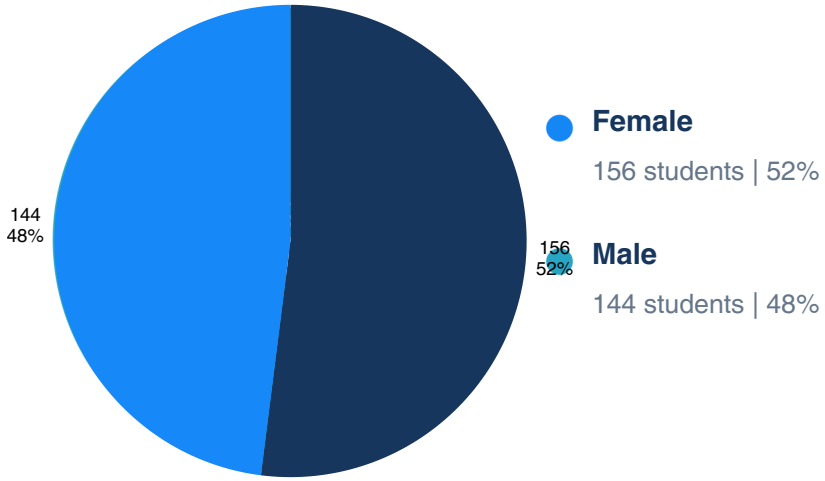

INSIGHT Third-year attendance is highest (80.23%); first-year attendance is lowest (76.98%).

Gender & Student Distribution

Corrected gender pie chart and student distribution

GENDER DISTRIBUTION

STUDENT COUNT BY CLASS

Female: 156 / 300 = 52%; Male: 144 / 300 = 48%. Counts total exactly 300 students.

Study Habits & Participation

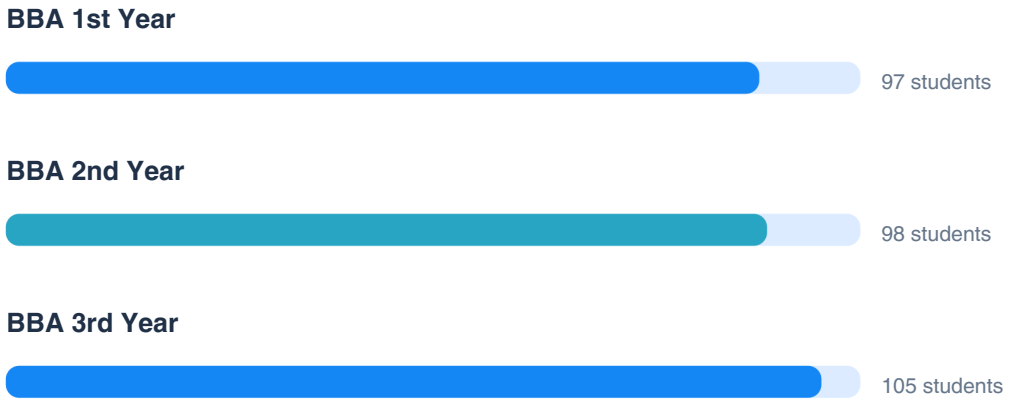

Explore engagement patterns without assuming cause and effect

AVERAGE MARKS BY CLASS

PARTICIPATION ANALYSIS

Use High / Medium / Low participation categories

Average marks are similar across classes; treat study hours and participation as factors to investigate.

Major Findings & Recommendations

Convert dashboard signals into practical academic actions

MAJOR FINDINGS

- Pass rate is 99.3% (298 students marked Pass).
- Average marks are 71.24; average attendance is 78.80%.
- 115 students have attendance below 75%.
- Third-year students have the highest average attendance (80.23%).
- Female students represent 52% of the dataset.

RECOMMENDED ACTIONS

01 **Monitor attendance**
Followupwithstudentsbelow 75%.

02 **Offer academic support**
Usementoringorremedialsessions where needed.

03 **Encourage engagement**
Promotesteadystudyhabitsand participation.

04 **Review regularly**
Refreshreportsandcompare patterns over time.

Conclusion & Future Scope

Using business intelligence to support student success

CONCLUSION

The Student Performance Analytics dashboard converts academic records into clear indicators of marks, attendance, student distribution and participation. Power BI makes these patterns easier to explore and communicate.

THE MAIN MESSAGE

The pass rate is high, but low attendance remains an important area for timely follow-up.

FUTURE SCOPE

- Compare performance by subject and semester.
- Add early-warning indicators for students needing support.
- Track trends as new records are added.
- Use slicers for focused analysis.

THANK YOU • QUESTIONS & DISCUSSION
